Saving Lives, Buying Time-Institute of Medicine 2004-10-09 For more than 50 years, low-cost antimalarial drugs silently saved millions of lives and cured billions of debilitating infections. Today, however, these drugs no longer work against the deadliest form of malaria that exists throughout the world. Malaria deaths in sub-Saharan Africa are currently just over one million per year and are rising because of increased resistance to the old, inexpensive drugs. Although effective new drugs called artesemisinins are available, they are unaffordable for the majority of the affected population, even at a cost of one dollar per course. Saving Lives, Buying Time: Economics of Malaria Drugs in an Age of Resistance examines the history of malaria treatments, provides an overview of the current drug crisis, and offers recommendations on maximizing access to and effectiveness of antimalarial drugs. The book finds that most people in endemic countries will not have access to currently effective combination treatments, which should include an artemisinin, without financing from the global community. Without funding for effective treatment, malaria mortality could double over the next 10 to 20 years and transmission will intensify.

Into Thin Air-Jon Krakauer 1998-11-12 When Jon Krakauer reached the summit of Mt. Everest in the early afternoon of May 10,1996, he hadn’t slept in fifty-seven hours and was reeling from the brain-altering effects of oxygen depletion. As he turned to begin the perilous descent from 29,028 feet (roughly the cruising altitude of an Airbus jetliner), twenty other climbers were still pushing doggedly to the top, unaware that the sky had begun to roil with clouds... Into Thin Air is the definitive account of the deadliest season in the history of Everest by the acclaimed Outside journalist and author of the bestselling Into the Wild. Taking the reader step by step from Katmandu to the mountain’s deadly pinnacle, Krakauer has his readers shaking on the edge of their seat. Beyond the terrors of this account, however, he also peers deeply into the myth of the world’s tallest mountain. What is at risk? What is at stake? And why does the story of Everest still matter today?

The Death and Life of Great American Cities-Jane Jacobs 2016-07-20 Thirty years after its publication, The Death and Life of Great American Cities was described by The New York Times as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the bitingly satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

Reducing Maternal and Neonatal Mortality in Indonesia-Indonesian Academy of Sciences 2013-12-26 The Republic of Indonesia, home to over 240 million people, is the world's fourth most populous nation. Ethnically, culturally, and economically diverse, the Indonesian people are broadly dispersed across an archipelago of more than 13,000 islands. Rapid urbanization has given rise to one megacity (Jakarta) and to 10 other major metropolitan areas. And yet about half of Indonesians make their homes in rural areas of the country. Indonesia, a signatory to the United Nations Millennium Declaration, has committed to achieving the Millennium Development Goals (MDGs). However, recent estimates suggest that Indonesia will not achieve by the target date of 2015 MDG 4 - reduction by two-thirds of the 1990 under - 5 infant mortality rate (number of children under age 5 who die per 1,000 live births) - and MDG 5 - reduction by three-quarters of the 1990 maternal mortality ratio (number of maternal deaths within 28 days of childbirth in a given year per 100,000 live births). Although much has been achieved, complex and indeed difficult challenges will have to be overcome before maternal and infant mortality are brought into the MDG-prescribed range. Reducing Maternal and Neonatal Mortality in Indonesia is a joint study by the U.S. National Academy of Sciences and the Indonesian Academy of Sciences that evaluates the quality and consistency of the existing data on maternal and neonatal mortality; devises a strategy to achieve the Millennium Development Goals related to maternal mortality, fetal mortality (stillbirths), and neonatal mortality; and identifies the highest priority interventions and proposes steps toward development of an effective implementation plan. According to the UN Human Development Index (HDI), in 2012 Indonesia ranked 121st out of 185 countries in human development. However, over the last 20 years the rate of improvement in Indonesia's HDI ranking has exceeded the world average. This progress may be attributable in part to the fact that Indonesia has put considerable effort...
into meeting the MDGs. This report is intended to be a contribution toward achieving the Millennium Development Goals.

Millions Saved-Amanda Glassman 2016-05-24
Over the past fifteen years, people in low- and middle-income countries have experienced a health revolution—one that has created new opportunities and brought new challenges. It is a revolution that keeps mothers and babies alive, helps children grow, and enables adults to thrive. Millions Saved: New Cases of Proven Success in Global Health chronicles the global health revolution from the ground up, showcasing twenty-two local, national, and regional health programs that have been part of this global change. The book profiles eighteen remarkable cases in which large-scale efforts to improve health in low- and middle-income countries succeeded, and four examples of promising interventions that fell short of their health targets when scaled-up in real world conditions. Each case demonstrates how much effort—and sometimes luck—is required to fight illness and sustain good health. The cases are grouped into four main categories, reflecting the diversity of strategies to improve population health in low- and middle-income countries: rolling out medicines and technologies; expanding access to health services; targeting cash transfers to improve health; and promoting population-wide behavior change to decrease risk. The programs covered also come from various regions around the world: seven from sub-Saharan Africa, six from Latin America and the Caribbean, five from East and Southeast Asia, and four from South Asia.

Disease Control Priorities, Third Edition (Volume 2)-Robert Black 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Do Vaccines Cause That?!-Martin G. Myers 2008
Almost 70% of parents who refuse to vaccinate their children do so because they believe vaccines may cause harm. Indeed vaccines have been blamed for causing asthma, autism, diabetes, and many other conditions most of which have causes that are incompletely understood. Do Vaccines Cause That?! A Guide for Evaluating Vaccine Safety Concerns provides parents with clearly understandable, science-based information about vaccines, immunization, and vaccine safety.

Harming Future Persons-Melinda A. Roberts 2009-07-31 Melinda A. Roberts and David T. Wasserman 1 Purpose of this Collection What are our obligations with respect to persons who have not yet, and may not ever, come into existence? Few of us believe that we can wrong those whom we leave out of existence altogether—that is, merely possible persons. We may think as well that the directive to be “fruitful, and multiply, and replenish the earth” 1 does not hold up to close scrutiny. How can it be wrong to decline to bring ever more people into existence? At the same time, we think we are clearly ob-gated to treat future persons—persons who don’t yet but will exist—in accordance with certain stringent standards. Bringing a person into an existence that is truly awful—not worth having—can be wrong, and so can bringing a person into an existence that is worth having when we had the alternative of bringing that same person into an existence that is substantially better. We may think as well that our obligations with respect to persons who have not yet, and may not ever, come into existence? At the same time, we think we are clearly ob-gated to treat future persons—persons who don’t yet but will exist—in accordance with certain stringent standards. Bringing a person into an existence that is truly awful—not worth having—can be wrong, and so can bringing a person into an existence that is worth having when we had the alternative of bringing that same person into an existence that is substantially better. We may think as well that our obligations with respect to future persons are triggered well before the point at which those persons commence their existence. We think it would be wrong, for example, to choose today to turn the Earth of the future into a miserable place even if the victims of that choice do not yet exist.

We Are the Weather-Jonathan Safran Foer 2019-09-17 In We Are the Weather, Jonathan Safran Foer explores the central global dilemma of our time in a surprising, deeply personal, and urgent new way. Some people reject the fact, overwhelmingly supported by scientists, that our planet is warming because of human activity. But do those of us who accept the reality of human-caused climate change truly believe it? If we did, surely we would be roused to act on what we know. Will future generations distinguish between those who didn’t believe in the science of global warming and those who said they accepted the science but failed to change their lives in response? The task of saving the planet will involve a great reckoning with ourselves—with our all-too-human reluctance to sacrifice immediate comfort for the sake of the future. We have, he reveals, turned our planet into a farm for growing animal products, and the consequences are catastrophic. Only collective action will save our home and way of life. And it all starts with what we eat—and don’t eat—for breakfast.

How Not to Die-Jan Garavaglia, M.D. 2008-10-14 WHEN THIS DOCTOR TALKS, YOU SHOULD LISTEN. Thousands of people make an early exit each year and arrive on medical examiner Jan Garavaglia’s table. What is particularly sad about this is that many of these deaths could easily have been prevented. Although Dr. Garavaglia, or Dr. G, as she’s known to many, could not tell these individuals how to avoid their fates, we can benefit from her experience and profound insight into the choices we make each day. In How Not to Die, Dr. G acts as a medical detective to identify the often-unintentional ways we harm our bodies, then shows us how to use that information to live better and smarter. She provides startling tips on how to make wise choices so that we don’t have to see her, or someone like her, for a good, long time. • In “Highway to the Morgue,” we learn the one commonsense safety tip that can prevent deadly accidents—and the reason you should never drive with the windows half open • “Code Blue” teaches us how to increase our chances of leaving the hospital alive—and how to insist that everyone caring for you practice the easiest hygiene method around • “Everyday Dangers” informs us why neat freaks live longer—and the best ways to stay safe in a car during a lightning storm Using anecdotes from her cases and a liberal dose of humor, Dr. G gives us her prescription for living a healthier, better, longer life—and unlike many doctors’ orders, this one is surprisingly easy to follow.

Organ Donation and Transplantation-Georgios Tsoulfas 2018-07-25 One of the most interesting and at the same time most challenging fields of medicine and surgery has been that of organ donation and transplantation. It is a field that has made tremendous strides during the last few decades through the combined input and efforts of scientists from various specialties. What started as a dream of pioneers has become a reality for the thousands of our patients whose lives can now be saved and improved. However, at the same time, the challenges remain significant and so do the expectations. This book will be a collection of chapters describing these same challenges involved including the ethical, legal, and medical issues in organ donation and transplantation. To Err Is Human-Institute of Medicine 2000-03-01 Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That’s more than die from motor vehicle accidents, breast cancer, or AIDS–three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public

Mycelium Running-Paul Stamets 2011-03-09 Mycelium Running is a manual for the mycological rescue of the planet. That’s right: growing more mushrooms may be the best thing we can do to save the environment, and in this groundbreaking text from mushroom expert Paul Stamets, you’ll find out how. The basic science goes like this: Microscopic cells called “mycelium”—the fruit of which are mushrooms—recycle carbon, nitrogen, and other essential elements as they break down plant and animal debris in the creation of rich new soil. What Stamets has discovered is that we can capitalize on mycelium’s digestive power and target it to decompose toxic wastes and pollutants (mycoremediation), catch and reduce silt from streambeds and pathogens from agricultural watersheds (mycofiltration), control insect populations (mycopesticides), and generally enhance the health of our forests and gardens (mycoforestry and myco-gardening). In this comprehensive guide, you’ll find chapters detailing each of these four exciting branches of what Stamets has coined “mycorestoration,” as well as chapters on the medicinal and nutritional properties of mushrooms, inoculation methods, log and stump culture, and species selection for various environmental purposes. Heavily referenced and beautifully illustrated, this book is destined to be a classic reference for bemushroomed generations to come. From the Trade Paperback edition.
